WORK EXPERIENCE

GOOGLE

New York, NY

Big Data Specialist Solutions Engineer

Sept 2022 - Aug 2024

- Contributed to the design and implementation of data lake and data warehouse solutions for a large retailer data platform by designing data schemas based on business requirements, implementing stream/batch ingestion, automating ETL process, and developing data transformations using BigQuery, SQL, Dataproc Spark, Airflow, and Python.
- Developed and optimized a near-real-time data pipeline using Pub/Sub, Dataflow, Spark Streaming, and Python to process sensor data for a grocery supply chain use case and achieved over 50% improvement in Data Freshness.
- Led cross-team initiatives for 5+ Retail CPG clients (\$5M-\$10M), driving Google Cloud big data adoption through technical discovery, POCs, and MVPs. Demonstrated significant cost savings and enhanced data/AI capabilities.
- Delivered in-depth technical training on Google Cloud data lake and data warehouse architectures to 10+ retail company engineering teams, covering topics such as data modeling, query optimization, and unified data quality and governance.

GOOGLE

Atlanta, GA

Solutions Engineer

Aug 2021 - Sept 2022

- Automated cloud resource deployment using Terraform. Monitored and troubleshoot technical issues, conducting root cause analysis. Collaborated with product/support teams to resolve customer platform issues and advocate feature requests.
- Optimized SQL queries for BigQuery, reducing query run time by 30% for complex datasets processing over 1TB of data daily, and implemented advanced clustering and partitioning strategies to minimize I/O operations, reducing costs by 15%.
- Automated Operational Health Review process using JavaScript, platform log APIs, and support ticket API. Developed scripts to analyze multi-source data and generate platform health metrics, resulting in adoption by 12+ customer accounts for decision-making reports and improved team productivity.

VULCAN

Seattle, WA

Business Systems Analyst Intern

Jun 2020 - Sept 2020

- Developed SaaS application on K2 (process automation platform), digitizing and automating the investment approval process. Conducted cost and feature analysis of K2 vs PowerApps, negotiating 3% savings in IT-BusApps org budget.
- Spearheaded market research, requirement analysis, and process modeling, reducing development errors by 30%. Facilitated cross-team collaboration on a 3-year cloud migration strategy, while managing user training and testing initiatives.

GIVING TECH LABS

Seattle, WA

Data Science Intern

Feb 2020 - Jun 2020

- Engineered Python and SQL data pipelines to analyze \$2.2 trillion market potential in the social innovation sector. Conducted grants and funding data research, creating data visualizations using Tableau to support market assessment.
- Applied LSA and pLSA topic modeling techniques on financial data using Python libraries (Scikit-learn, NLTK, Gensim) to identify money flow patterns in the non-profit sector. Enhanced custom search engine, improving funding pattern insights.

EDUCATION

University of Wisconsin-Madison

Madison, WI

Masters of Science - Computer Science

Sept 2024 - May 2026

Relevant Coursework - Advanced Data Management, Database Systems, Artificial Intelligence, Data Structures and Algorithms

University of Washington-Seattle

Seattle, WA

Bachelor of Science - Informatics Data Science, Minor in Applied Mathematics

SKILLS

Python, Java, C++, AWS, GCP, Bigquery, AWS Redshift, Vertex AI, Dataproc, Dataplex, Dataflow, Apache Hadoop, Spark, AWS Glue, Apache Airflow, SQL, R, Tableau, Looker, PowerBI, PowerApps, Git, Terraform, Dimensional modeling, Schema design, Data Governance, Data Quality, Query Optimization, ETL, Data Visualization, Data Analysis, Machine Learning, NLP

Certifications - Google Cloud Professional Data Engineer, Google Cloud Professional ML Engineer
